

CLAIMS

What is claimed is:

1. A continuous-operation scrubber system, comprising:
 - a pair of channels connected in parallel to a supply line;
 - 5 a scrubber coupled with each channel for removing a gas from each channel; and
 - a purge system coupled with each scrubber for purging the removed gas from the scrubber.
2. The continuous-operation scrubber system of Claim 1 further comprising a control system for directing a flow of gas among the channels.
- 10 3. A method for continuously scrubbing a gas sample comprising the steps of:
 - delivering a gas sample to a multiple-scrubber system including a first scrubber and a second scrubber connected in parallel;
 - 15 directing the gas sample through the first scrubber;
 - directing the gas sample through the second scrubber;
 - purging the first scrubber while directing the gas sample through the second scrubber; and
 - purging the second scrubber while directing the gas sample through the first scrubber.
- 20 4. The method of Claim 3 wherein flow of the gas sample alternates between passing through the first scrubber and passing through the second scrubber.
